

Firefox dolazi i na mobilne uređaje

Pozitivna iskustva milijuna korisnika Firefoxa bili su poticaj Mozilli za izradu verzije koja bi se koristila na mobilnim uređajima.

Aza Raskin (http://en.wikipedia.org/wiki/Aza_Raskin) koji pri Mozilli vodi projekt za testiranje primjene, na svojoj je web stranici objavio i video prikaz koncepta s kojim želi predočiti ključne stvari ovog programa za mobilne uređaje. Prije svega, pokušava se riješiti problem malog prostora pri upravljanju podacima na zaslonu (prisutan kod većine mobilnih uređaja) kako bi se omogućilo jednostavno i ugodno pretraživanje.

Ovaj koncept Firefoxa vjerojatno će se upravljati jednim dodirom prsta na zaslonu. Zasloni osjetljivi na dodir su česti u mobilnoj telefoniji kao i kod Apple iPhonea koji za razliku od budućeg Firefoxovog koristi višekratni (multitouch) dodir.

Pri otvaranju pretraživača vide se dvije stvari: bookmarks desno i veliki plus znak lijevo koji otvara nove tabove ili stranice. Klik na bookmarks zumira pretraživač.

the sceptic

Published by [Abel](#) on August 1, 2005 in Coding, Gaming, General, Interactive Fiction, Python and Usability. • 0 Comments.

Slightly Old Stuff

The following is a summary of stuff I worked on before the new Toolness was created, but after I stopped maintaining any of my old sites.

Programming

Nanowarcoder – During the summer of 2004, I realized how great RSS syndication was.

My photostream

Python (3)
Usability (0)

Pomicanje na stranici je moguće povlačenjem ili dodirom prsta. Kreiranje novog taba je jednostavno. Klikom na veliki plus otvara se prazno mjesto gdje se postavlja tab i potom zumira.

all of these are problems

ne of it – glimmering rays are just plain useless. They’re train of thought, they and your screen with it let you do what you if true.

re exists out there in software marketplace, all the options out there impossible to figure out in works. One that’s both benefits of your facilities.

etty long time. We’ve surfaces. And we’re really in making your L and more productive, yourself as a novice, an

common computing tasks easier and faster than ever before. You get a huge productivity boost and a simpler digital life. And now that Emsi is free, it won’t cost you a pretty.

Jeffrey Blodberg of the Wall Street Journal [explains](#):

Emsi is dead simple to use. You just hold down the Caps Lock key and type an “emoji-command,” which is displayed in a translucent overlay. Once the command is typed, you simply release the Caps Lock key to activate it, and the overlay disappears. If you type fast, it all happens in a flash.

For instance, to launch the Firefox Web browser, you just hold down the Caps Lock key and type “open firefox.” To look up the meaning of the word “productivity,” you just hold down the Caps Lock key and type “define productivity.”

Turning Caps Lock into a command key might sound strange at first — no other software works that way, does it? — but our philosophy is that interfaces can’t hope to be better than what you’re used to unless they’re different from what you’re used to. You’ll find that Emsi is different in a lot of other ways, too. Give the Caps Lock method a try: if you don’t like it, you can of course configure Emsi to be activated in the way you prefer.

zoom out

Postavljujući pokazivač na URL vidi se popis prethodno otvaranih stranica. Standardne kontrolne funkcije kao što su naprijed i nazad smještene su lijevo na stranici.

Ovaj koncept pod imenom Fenec je samo početak razvoja i širenja Mozillinih programa na mobilne uređaje.
